access})) OR {social exclusion} OR {economic marginali?ation} OR {income
inequality} OR {discriminatory law*} OR {discriminatory policies} OR {discriminatory
policy} OR {economic empowerment} OR {economic transformation} OR ({global
market} AND {empowerment}))) AND PUBYEAR < 2018 AND PUBYEAR > 2012

PROCESS

The first stage of this review was to compare the original search string to the targets listed under the Sustainable Development Goal (SDG).

[SDG targets listed here: https://sustainabledevelopment.un.org/sdg10](https://sustainabledevelopment.un.org/sdg10)

The purpose of this stage was to understand whether the Scopus results correctly reflected the theme of the SDG. The SDGs were unanimously agreed by member states of the United Nations, with very deliberate language and scope/ exclusions, so the results of this analysis should accurately reflect the specific SDG themes.

SDG 11 aims to reduce **(economic) inequalities within and between countries**. These comprise of individual and larger-scale inequalities, as well as social and economic inequalities. Poverty should be reduced by encouraging an **income growth** for the most impoverished. Equal opportunities and inclusiveness regarding individuals of all segments of the population are promoted, in part through the establishment of **fiscal, wage and social protection policies**, and **inequalities should be reduced**. Inequalities between developed and developing countries should be reduced: Monitoring and regulation of international financial markets should be improved and **developing countries should be empowered in financial and economic decision-making processes**. Finally, **safe and responsible migration and mobility** between countries should be regulated.

A Scopus search was conducted using the original search string. This returned 192,794 document results.

The top 20 cited articles were reviewed. 17 of the 20 articles do not closely reflect the theme of the SDG. The majority of these articles related to healthcare and medicine, mathematics and IT.

Top 20 most cited articles listed in Scopus from the original search string:

*red text shows articles which do not closely match the theme of the SDG

Title	Year	Source title	Cited by	EID
Deep learning	2015	Nature	10507	2-s2.0-84930630277

The Brain's Default Mode Network	2015	Annual Review of Neuroscience	556	2-s2.0-84937400849

In addition, a randomised sample of 20 articles was reviewed. 13 of the 20 articles do not closely reflect the theme of the SDG. The vast majority of these articles relate to the field of healthcare and medicine, and inequalities within these fields. However, the focus of the targets of the SDG lies in financial and economic inequalities and it was therefore decided to classify these as irrelevant. Other articles related to the field of mathematics (hit on equality), economics and sports.

Documents by subject area

Documents by subject area

The charts confirm the results found when analysing the top 20 most cited articles and the randomised sample: a large proportion of the articles relate to the field of 'Medicine' and 'Mathematics'. The field 'Other' is largest and documents are indeed found in the top 20 cited and the randomised sample that relate to 'Physics and Astronomy' and other subfields. The analyses show that the query should be updated with more narrow keywords, as for example 'inequality' led to hits in physics, mathematics and healthcare.

Update 1) The search keywords were edited to remove the broader search terms, or to make them more specific by combining with other search keywords.

Original search string: 192,794 document results

TITLE-ABS-KEY((equality OR inequality OR {reform program} OR {reform programme} OR {reform programs} OR {reform programmes} OR {political inclusion} OR {social protection} OR immigration OR emigration OR {foreign direct investment} OR {development assistance} OR {development gap} OR {development gaps} OR {migrant remittance} OR {responsible migration} OR {migration policy} OR {migration policies} OR {north-south} OR {taxes} OR discrimination OR {social exclusion} OR {marginalized population} OR {marginalized populations} OR {marginalised population} OR {marginalised populations})) AND PUBYEAR BEF 2018 AND PUBYEAR AFT 2012

Rationale for edits to the search keywords:

query term	decision	rationale
Equality	Changed to equality AND (economic OR financial OR socio-economic)	Equality as a keyword on its own is too broad and leads to hits in multiple fields, among which healthcare and mathematics. This part of the query was changed - by including socio-economic, economic, financial - to ensure articles are retrieved that relate to the theme of the SDG.
Inequality	Changed to inequality AND (economic OR financial OR socio-economic)	Inequality as a keyword on its own is too broad and leads to hits in multiple fields, among which healthcare and mathematics. This part of the query was changed - by including socio-economic, economic, financial - to ensure

		articles are retrieved that relate to the theme of the SDG.
Discrimination	DELETED	Brought up too many irrelevant hits in IT and physics, discrimination can be linked to inequality and seems unnecessary
Taxes	Changed to: developing AND ({tariffs} OR {tariff} OR {zero-tariff} OR {duty-free access})	Taxes as a keyword are too broad, changed the keyword to keywords regularly used in the field of development studies. In addition, a combination is made with the keyword developing to indicate a relation with developing countries
Social protection	Changed to 'social protection policy' OR 'social protection policies'	Narrowed down to a policy level, as indicated in the target
Immigration	Changed to immigration AND NOT (chemistry OR disease OR biodiversity)	Immigration is a common keyword in migration studies, but also in chemistry and biodiversity. Narrowing down the keyword was not possible as it proved that many relevant studies would be excluded. Therefore, an AND NOT function was added to exclude non-relevant fields
Emigration	Changed to immigration AND NOT (chemistry OR disease OR biodiversity)	Emigration is a common keyword in migration studies, but also in chemistry and biodiversity. Narrowing down the keyword was not possible as it proved that many relevant studies would be excluded. Therefore, an AND NOT function was added to exclude non-relevant fields
Development assistance	DELETED	Common keyword for medical studies and not necessarily for overcoming a development gap as would be relevant for this SDG, therefore deleted
Reform program (and variants	Deleted and changed to {economic reform policy} OR {economic reform policies}	Reform program is too broad and can relate to about everything, from healthcare and HR to biodiversity and land use planning.
North-south	Changed to {north-south divide}	North-south is too broad, north-south divide is a common term to indicate differences between the developing world and the developed world
Marginalized population and variants	Changed to {economic marginali?ation}	Too broad for the purpose of economical marginalization as indicated in the theme of the SDG; changed it to a more narrow term and variant

Updated search string (first update): 39,333 document results

TITLE-ABS-KEY (((equality AND (economic OR financial OR socio-economic)) OR (inequality AND (economic OR financial OR socio-economic)) OR {economic reform policy} OR {economic reform policies} OR {political inclusion} OR {social protection policy} OR {social protection policies} OR (immigration AND NOT (chemistry OR disease OR biodiversity)) OR (emigration AND NOT (chemistry OR disease OR biodiversity)) OR {foreign direct investment} OR {development gap} OR {development gaps} OR {migrant remittance} OR {responsible migration} OR {migration policy} OR {migration policies} OR {north-south divide} OR (developing AND ({tariffs} OR {tariff} OR {zero-tariff} OR {duty-free access})) OR {social exclusion} OR {economic marginali?ation})) AND PUBYEAR < 2018 AND PUBYEAR > 2012

The results of the updated search were reviewed to check whether they aligned closely with the SDG theme.

The updated search returned 39,333 document results, compared to 192,794 document results for the original search.

The top 20 cited articles were reviewed. Eight of the 20 articles do not closely reflect the theme of the SDG. Compared to the original search query, articles related to IT and mathematics were excluded. Articles that were included but which are not closely related to the theme of the SDG cover topics related to epidemiology, media studies, biology, history and medicine. These were all included to due hits on the keyword 'immigration'. One article covers studies on democracy, but suggested a new form of democracy on the basis of caring, not necessarily dealing with the issues the SDG aims to alleviate.

Recent developments of zinc oxide based photocatalyst in water treatment technology: A review	2016	Water Research	548

The first update was seen to successfully remove a majority of irrelevant articles related to IT, mathematics, physics, and in part medicine. The co-occurrence of terms shows that keywords related to medicine and healthcare are still found in articles retrieved by this search query. Further investigation showed that part of these articles on healthcare and medicine are related to the theme of the SDG, as these articles focus on a combination of inequalities in income / opportunities and, as a result, higher risks on illness or less accessible healthcare systems. Another note should be made regarding the keywords related to ecology and species migration. These articles are found by hits on migration, and some results are still included despite excluding the field of biodiversity in this query. It could be an option to include synonyms for biodiversity, such as species richness, or to exclude 'species distribution' in the search query. In addition, multiple keywords could be added to tailor this search query towards results on the targets of the theme. The latter is done in the second update.

Update 2) A second update was made to the search string to add hits on missing targets of the SDG

The table below was used to identify missing keywords for targets that were not (fully) covered yet:

Target	Keywords to be added
By 2030, progressively achieve and sustain income growth of the bottom 40 per cent of the	{income inequality}

population at a rate higher than the national average	
By 2030, empower and promote the social, economic and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status	INCLUDED
Ensure equal opportunity and reduce inequalities of outcome , including by eliminating discriminatory laws, policies and practices and promoting appropriate legislation, policies and action in this regard	{discriminatory law*} {discriminatory policy} {discriminatory policies} {economic empowerment} {economic transformation}
Adopt policies, especially fiscal, wage and social protection policies , and progressively achieve greater equality	INCLUDED
Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations	{global market} AND {empowerment} -- no specific keywords on financial markets and regulations added as this primarily led to results on capitalism / management structures / law / finances unrelated to the SDG
Ensure enhanced representation and voice for developing countries in decision-making in global international economic and financial institutions in order to deliver more effective, credible, accountable and legitimate institutions	INCLUDED
Facilitate orderly, safe, regular and responsible migration and mobility of people , including through the implementation of planned and well-managed migration policies	INCLUDED

Second update search: 41,895 document results

TITLE-ABS-KEY (((equality AND (economic OR financial OR socio-economic)) OR (inequality AND (economic OR financial OR socio-economic)) OR {economic reform policy} OR {economic reform policies} OR {political inclusion} OR {social protection policy} OR {social protection policies} OR (immigration AND NOT (chemistry OR disease OR biodiversity)) OR (emigration AND NOT (chemistry OR disease OR biodiversity)) OR {foreign direct investment} OR {development gap} OR {development gaps} OR {migrant remittance} OR {responsible migration} OR {migration policy} OR {migration policies} OR {north-south divide} OR (developing AND ({tariffs} OR {tariff} OR {zero-tariff} OR {duty-free access})) OR {social exclusion} OR {economic marginali?ation} OR {income inequality} OR {discriminatory law*} OR {discriminatory policies} OR {discriminatory policy} OR {economic empowerment} OR {economic transformation} OR ({global market} AND {empowerment})))) AND PUBYEAR < 2018 AND PUBYEAR > 2012

The results of the updated search were reviewed to check whether they aligned closely with the SDG theme.

The updated search returned 41,895 document results, compared to 39,333 document results for the search with search query v1.

The top 20 cited articles were reviewed. Six of the 20 articles did not closely reflect the theme of the SDG. No major changes were found compared to the top 20 cited obtained with query v1. The six articles were already flagged as irrelevant during update 1, these relate to epidemiology, media studies, biology, history and genetics. The new keywords led to three new articles in the top 20, which are all closely related to the theme of the SDG.

Top 20 most cited articles listed in Scopus from search string v2:

*red text shows articles which do not closely match the theme of the SDG

--	------	--------	-----	--------------------

In addition, a randomised sample of 20 articles was reviewed. Four of the 20 articles do not closely reflect the theme of the SDG. These articles primarily relate to healthcare, inequality in healthcare, and social differences which are not linked to any target of this theme. One article was related to linguistic studies. The excluded articles were found by using this query through hits on 'immigration' and 'inequality'.

Randomised sample of 20 articles listed in Scopus from search string v2:

*red text shows articles which do not closely match the theme of the SDG

Graphical summary of co-occurrence of terms from 2,000 randomly selected results:

The second update added new keywords to the search query, and as a result approximately 2,500 articles were added to the document results. The analyses show that a low number of irrelevant articles are still retrieved from a variety of fields. However, the co-occurrence of terms show that there is a better focus on the different targets and the theme of SDG10, compared to the original search string.
